Project Overview

Business Problem

Wayne Drone Enterprises relied on disconnected Excel spreadsheets to manage accounts and sales opportunities, limiting reporting accuracy and operational visibility. Leadership identified the need to prepare and migrate this data into a centralized CRM environment.

Goal

Clean, standardize, and validate legacy account and opportunity data in Excel to create CRM-ready datasets for future Salesforce migration and reporting initiatives.

Process

1. Imported and reviewed raw CSV datasets in Microsoft Excel, including accounts, sales pipeline, products, and sales team data to assess CRM migration readiness.
2. Identified and corrected data quality issues such as inconsistent formatting, duplicate records, missing values, and naming inconsistencies impacting reporting accuracy.
3. Standardized and validated datasets to improve data integrity, maintain cross-dataset consistency, and prepare CRM-ready files for future Salesforce migration initiatives.

Challenges

- Resolved inconsistent formatting, duplicate records, and missing values across multiple datasets that would have impacted CRM migration accuracy and reporting reliability.
- Validated relationships between account, product, and sales pipeline data to improve consistency and prepare structured CRM-ready files for Salesforce migration.

Results

Successfully transformed raw Kaggle datasets into structured, CRM-ready files prepared for Salesforce migration and future reporting initiatives.

Before Standardization

Validated account relationships and standardized opportunity records prepared for Salesforce migration and reporting analysis.

Final Deliverables:

- 1,510 account records
- 8,800 opportunity pipeline records
- 41 sales team records
- 7 standardized product records

The finalized datasets improved data consistency, reduced potential import issues, and established a cleaner foundation for future CRM reporting and analytics.
