Business Problem

Leadership lacked centralized visibility into account revenue performance, industry trends, and geographic sales distribution due to disconnected reporting processes.

Objective

Develop a Salesforce dashboard that transforms CRM account data into executive-level reporting insights for sales operations and leadership teams.

Executive Summary

The dashboard also identified significant revenue concentration within key geographic regions, improving leadership visibility into account segmentation, revenue distribution, and overall CRM reporting performance.

Key Findings

- Enterprise accounts generated the largest share of total revenue.
- The United States represented the highest-performing billing region.
- Technology and finance industries showed the strongest revenue contribution.
- Centralized Salesforce reporting improved visibility into account performance and revenue segmentation.

Business Impact

The dashboard established a scalable Salesforce reporting framework that improved executive visibility into CRM revenue performance and supported future sales operations analysis initiatives.
