Project Overview

Business Problem

Wayne Drone Enterprises relied on disconnected Excel spreadsheets to manage accounts and sales opportunities, limiting reporting accuracy and operational visibility. Leadership identified the need to prepare and migrate this data into a centralized CRM environment.

Goal

CRM migration initiative focused on Salesforce account imports, field mapping validation, and establishing structured account records for future sales operations reporting.

Process

- 1. Prepared, cleaned account datasets, and standardized Salesforce field mappings for CRM import readiness.
- 2. Imported account records into Salesforce Developer Edition using the Salesforce Data
- 3. Import Wizard and validated field relationships.
Reviewed import results, resolved validation errors, and confirmed successful account creation for future reporting and pipeline management.

Challenges

Address Validation & Import Errors

Several Salesforce account records failed validation due to inconsistent formatting of country, state, and city in the source data. Geographic values were standardized in Excel, and failed records were corrected and successfully reprocessed through a secondary import cycle.

	B	C	D
	Success	Created	Error
	FALSE	FALSE	FIELD_INTEGRITY_EXCEPTION:There's a problem with this state, even though it may appear correct. Please select a state from the list of valid states.: Billing State/Province:BillingState --
	FALSE	FALSE	FIELD_INTEGRITY_EXCEPTION:There's a problem with this state, even though it may appear correct. Please select a state from the list of valid states.: Billing State/Province:BillingState --
	FALSE	FALSE	FIELD_INTEGRITY_EXCEPTION:There's a problem with this state, even though it may appear correct. Please select a state from the list of valid states.: Billing State/Province:BillingState --
	FALSE	FALSE	FIELD_INTEGRITY_EXCEPTION:There's a problem with this state, even though it may appear correct. Please select a state from the list of valid states.: Billing State/Province:BillingState --
	FALSE	FALSE	FIELD_INTEGRITY_EXCEPTION:There's a problem with this state, even though it may appear correct. Please select a state from the list of valid states.: Billing State/Province:BillingState --
	FALSE	FALSE	FIELD_INTEGRITY_EXCEPTION:There's a problem with this state, even though it may appear correct. Please select a state from the list of valid states.: Billing State/Province:BillingState --
	FALSE	FALSE	FIELD_INTEGRITY_EXCEPTION:There's a problem with this state, even though it may appear correct. Please select a state from the list of valid states.: Billing State/Province:BillingState --
	FALSE	FALSE	FIELD_INTEGRITY_EXCEPTION:There's a problem with this country, even though it may appear correct. Please select a country/territory from the list of valid countries.: Billing Country:Billin
	FALSE	FALSE	FIELD_INTEGRITY_EXCEPTION:There's a problem with this country, even though it may appear correct. Please select a country/territory from the list of valid countries.: Billing Country:Billin
	FALSE	FALSE	DUPLICATES_DETECTED:Use one of these records?:--
2UWYAY	TRUE	TRUE	
2UXYAY	TRUE	TRUE	
2UYAY	TRUE	TRUE	
2UZAY	TRUE	TRUE	
2UaYAI	TRUE	TRUE	
2UbYAI	TRUE	TRUE	
2UcYAI	TRUE	TRUE	
2UdYAI	TRUE	TRUE	
2UeYAI	TRUE	TRUE	

First-pass Salesforce Data Import Wizard results revealed FIELD_INTEGRITY_EXCEPTION validation errors related to Billing State and Country formatting inconsistencies within the source dataset.

Salesforce ID Verification

Post-import validation revealed Salesforce reports displayed shortened 15-digit record IDs instead of the full 18-digit case-safe IDs required for accurate cross-system verification. A custom Salesforce configuration and revised reporting structure were implemented to validate imported records against the original source dataset.

Report: Accounts

Accounts Number

this report is used for the import Account number verification.

Total Records
1,511

Account Name	Account ID
Nam-zim	001NS00002gm2UW

	A	B	C
1	Id	Success	Created
2	001NS00002gm2aaYAA	TRUE	TRUE
3	001NS00002gm2abYAA	TRUE	TRUE
4	001NS00002gm2acYAA	TRUE	TRUE
5	001NS00002gm2adYAA	TRUE	TRUE
6	001NS00002gm2aeYAA	TRUE	TRUE
7	001NS00002gm2afYAA	TRUE	TRUE
8	001NS00002gm2agYAA	TRUE	TRUE

Standard Salesforce reports displayed shortened 15-digit Account IDs, requiring additional Salesforce configuration to expose the full 18-digit case-safe ID used for accurate import validation and cross-system verification.

Results

Successfully imported and validated cleaned account records into Salesforce using Salesforce Developer Edition and the Salesforce Data Import Wizard.
